

- ◆ Caregiver alert if the wearer is outside SafeZone
- ◆ Caregiver alert if the wearer falls down
- ◆ Caregiver alert if the wearer presses the button
- ◆ Caregiver's phone commands Finder to make a 3-way call to the 911-Operator closest to the wearer

911Finder Cellular Watch is different because you are in charge --

Finder provides peace of mind for the caregiver that the wearer is safe. The wearer could have dementia, Alzheimer's, autism, or is just prone to wander. When the wearer walks away from the premises, the caregiver receives a notification that the wearer has gone beyond a location set by the caregiver.

If the wearer gets lost or has an emergency, a push of the button calls their caregiver. The caregiver receives the wearer's GPS location and can help the wearer back to safety. If the caregiver believes the wearer has an emergency, the caregiver taps an icon on their phone to use our patented method that commands the Finder to make a 3-way call to the 911-Operator located closest to the wearer. Finder provides the caregiver the real-time GPS location of the wearer to help First Responders get to the wearer quickly.

Finder works over a nationwide cellular service so the wearer could be right at home, five blocks away, or many miles away. So, even if the wearer got on a city bus or took the family car, Finder notifies the caregiver immediately. If the caregiver is away from their normal location it's not a problem, they still receive the notification on their phone.

Wearer Friendly

- Press 1 button to call a caregiver
- Auto answers call from a caregiver and provides superior volume
- Press 1 button to see the time
- The screen shows status and time
- BlueTooth to support earpiece
- Finder band fits wrists from children up to adults
